Marketing operations | CRM and lifecycle | Automation and integrations | Technical build

PROFILE

Dev-capable marketing operations manager with eight years of founder and client-side delivery. Builds the systems behind growth: lead capture, CRM journeys, campaign data, reporting, landing pages, integrations and practical automation. Can work from a commercial brief through process design and hands-on implementation, reducing the engineering dependency that slows lean marketing teams.

TECHNICAL MARKETING EVIDENCE

- Built an outbound cold-email prospecting operation covering **300 researched prospects**, with enrichment, verification, duplicate control, approval states, controlled **25-contact batches** and **three-step sequences**.
- Designed and built a **pre-launch coaching qualification funnel** that turns a custom assessment into personalised results, a paid-programme application and a gated sales call, connecting the data, decision logic and conversion journey.
- Took **two consumer apps**, FullWise and GloboTrotter, from market research to **public App Store release**, owning positioning, onboarding, subscription messaging, listings, screenshots, landing-page thinking and launch QA.
- Built and deployed a B2B workflow product and buyer-facing demo in **13 days**, turning spreadsheet-heavy work into structured data, role-based workflows, review steps and PDF output.

CORE CAPABILITIES

Marketing operations Lead capture, lifecycle stages, segmentation, routing logic, campaign taxonomy, data hygiene, campaign QA

CRM and analytics HubSpot, GoHighLevel, Monday CRM, GA4, Looker Studio, Mixpanel, UTM, funnel and attribution logic

Build and integration JavaScript, TypeScript, React, Supabase, APIs, webhooks, Zapier, Firebase, Google Cloud, Netlify

AI-enabled workflow Research synthesis, enrichment, message variants, process automation, QA workflows, Claude, ChatGPT, Codex

EXPERIENCE

Glenmont Circle | Nov 2024-Present

Growth and Product Marketing Operator | Part-time product studio

- Own the operating layer between product and growth, connecting customer research, positioning, onboarding, launch assets, conversion journeys and release requirements.
- Build the pages, demos, data-backed tools and workflow logic behind campaigns instead of relying on a separate engineering queue for every implementation.
- Turn repeatable work into documented AI-assisted processes for research, content variants, campaign preparation, quality checks and structured handoffs.
- Translate between commercial and technical teams by defining requirements, investigating data and workflow failures, and shipping practical fixes.

Kaush Media | Nov 2016-Nov 2024

Founder and Web and Growth Marketing Consultant | Self-employed

- Converted founder requirements into working marketing infrastructure across websites, landing pages, forms, lead capture, CRM stages, follow-up logic and reporting.
- Configured and connected WordPress, Webflow, Shopify, GoHighLevel, analytics and third-party services, troubleshooting data and user-journey issues through launch.
- Owned delivery from process discovery and data requirements through build, testing, documentation, launch support and stakeholder handover.
- Combined campaign and operational thinking so clients received a maintainable acquisition and follow-up system rather than disconnected assets.

EDUCATION AND DEVELOPMENT

MSc Performance Analysis | Middlesex University | 2012-2013

BA Business Management 2:1 | University of Westminster | 2007-2010

Professional development | HubSpot Digital Advertising | Google Digital Marketing | SEO and Email Marketing
